

Weld-In Thermowells are available in a variety of materials, process connection sizes, lengths and optional lagging extensions. Thermowell specifications should be based on process conditions which include strength, temperature, pressure and corrosion-resistance requirements. Weld-In thermowells are welded directly into the process apparatus. They are designed with a standard 0.260" or 0.385" bore diameter to accommodate sensing elements with a 0.252" or 0.377" maximum diameter, respectively. The tapered design is suited for heavy-duty applications where greater rigidity is required due to process conditions. These wells are available as separate components or as part of complete sensor assemblies.

("U" length for non-lagging wells) = "S" - 1 1/2"  
 ("U" length for lagging wells) = "S" - 1 1/2" - "T"  
 (To solve for "T"), "T" = "S" - "U" - 1 1/2" (When "U" and "S" are specified)
